Navtrack

Open source GPS tracking system based on .NET and React.

navtrack.com - codeagency.com

[Discord](#)

Running Navtrack

1. [From source code](#)
2. [With Docker containers](#)

Running from source code

Requirements

- .NET 8 SDK (<https://dotnet.microsoft.com/en-us/download/dotnet/8.0>)
- Node.js (<https://nodejs.org/>)
- Docker (to run MongoDB) (<https://docs.docker.com/get-docker/>)
- Optional: Rider or Visual Studio

Steps

1. Clone this repository
2. Open up a terminal
3. Run npm install

```
cd frontend  
npm install
```

3. Build the solution

```
dotnet build
```

4. (Optional) Start MongoDB using our development docker-compose file or if you already have a MongoDB instance running you can configure the connection strings in the following 2 files, one for the API and one for the Listener service.

```
docker-compose -f docker-compose.dev.yml up
```

```
backend/Navtrack.Api/appsettings.Development.json  
backend/Navtrack.Listener/appsettings.Development.json
```

5. Start the API

```
dotnet run --project backend/Navtrack.Api
```

6. Start the Listener service

```
dotnet run --project backend/Navtrack.Listener
```

7. Start the web interface with

```
cd frontend/web  
npm start
```

Running with Docker containers

1. Install docker

2. Get the latest docker-compose.yml

```
curl https://raw.githubusercontent.com/navtrack/navtrack/main/docker-  
compose.yml -o docker-compose.yml
```

3. Run Docker Compose

```
docker-compose up
```

or

docker compose up

4. Open Navtrack in a browser

<http://localhost:3000>
